**About this Document**

April 28, 2015

This X12 837 *Interim Specification* document explains the functional specifications for a connection between Healthix and a participating organization for the purpose of receiving from claims (837) data.

**Important notes:**

- This document maps to the HIPAA\_5010:837apP standards
- The Healthix technical platform is being upgraded to InterSystems HealthShare version 2015.1

➡ ***Interim note:*** *Healthix is currently building a new platform, whose development and testing may result in updates to this specification through mid-2015. Interim notes throughout this document highlight areas in which the specification is likely to change.*

## Revision History

## 1 Introduction

X12 is a standard for electronic data interchange developed by the Accredited Standards Committee (ASC) of the American National Standards Institute (ANSI). The X12 standard contains hundreds of document types, a subset of which support the Health Insurance Portability and Accountability Act (HIPAA) requirement of widespread use of electronic data interchange in the United States.

HIPAA schemas (e.g. HIPAA\_5010) further define the structure and characteristics of particular X12 document types.

Healthix consolidates patient data in various formats and from many data sources. X12 documents provide important healthcare coverage and clinical data that Healthix adds to the unified patient record.

This specification details the process of transmitting X12 documents to Healthix and the capability of Healthix to digest the documents' data. The Healthix software platform is InterSystems HealthShare 2015.1.

Healthix supports the import of the following document types:

- Health Care Claim: HIPAA\_5010:**837**apP

Note that Healthix stores but does not display or use any financial information included in the adjudicated claims data it receives.

## 2 Transactions

### 2.1 Sending Data to Healthix: Process Summary

During implementation, Healthix provides credentials to the participant to enable the participant to access Healthix's Secure File Transfer Protocol (SFTP) directory, used to submit X12 documents. Healthix processes new X12 documents on a constant basis.

Healthix processes each incoming X12 document, extracting data according to the details provided later in this specification. After processing, the static X12 document itself may be archived or discarded. In either case, the Healthix system does not reference the static X12 document for the use or display of data.

#### **X12 document upload process:**

1. Using an FTP client (e.g. WinSCP), establish a connection to the Healthix FTP site using the SFTP protocol (`sftp:\\`)
  - a. The Healthix SFTP host name is `sftp.healthix.org`(Port 22)
  - b. Healthix provides each participant with a SFTP account and directory during project implementation
2. When prompted, authenticate using the credentials Healthix assigns during implementation
3. Transfer the X12 document(s) to the SFTP site
4. Healthix processes the X12 documents as they arrive at the SFTP site

### 2.2 Business process

Healthix will work with existing and prospective participants by taking their existing 837 and designing a new interface if necessary for each distinct formats. This is with the assumption that all participants have established claims business process on their end and are actively working with payers for the claims processes with their existing 837 format. Healthix will accommodate changes and mapping on its side to make sure that all the data segments that are coming across in 837 from different participant are sourced correctly into its database.

Although Healthix's system HealthShare can store monetary segments that come across 837, due to data sensitivity, these segments has been removed from this specification document.

Some Participants will not send subscriber's demographic information in 837 file. For these participants, Healthix will use MRN to match the subscriber data and add claim record. If the MRN doesn't exist in Healthix database for particular subscriber, the subscriber claim record will be rejected and will be sent back to participant on the error report.

For Participants sending subscriber's demographic information on 837 file. If a subscriber comes across in 837 file without matching MRN, Healthix will create a new record for such subscriber and record all the information provided in 837 file.

### 3 X12 Document Structure and Healthix Processing

#### 3.1 Health Care Claim (837)

Healthix supports the import of the Health Care Claims document HIPAA\_5010:837apP (referred to as “837” in this specification). The 837 follows a hierarchical looping structure, with each loop indicated by an identifier (e.g. “2000A”):

- 1000A – Submitter
  - 1000B – Receiver
  - 2000A – Billing Provider
    - 2010AA Billing Provider Name
    - 2010AB Pay to the Address
- 2000B – Subscriber
  - 2010BA Subscriber Secondary Identification
  - 2010BB Payer Name
- 2300 – Claim
- 2400 – Claim Line
  - 2100C- Provider
  - 2100D-Patient
  - 2200D-Claim

The following table outlines the data that Healthix consumes from the 837. Any data elements not listed in this table are not currently stored within Healthix.

| Required          | ELEMENT | ELEMENT DESCRIPTION           | Value      | DESCRIPTION                      |
|-------------------|---------|-------------------------------|------------|----------------------------------|
| <b>Loop 1000A</b> |         |                               |            |                                  |
